

PLASMA TIMES

April, 2018 16th Edition

Keshe Manufacturing Arizona

Spaceship Blueprint Release by Keshe Foundation

"We are ready to open Space to Mankind." MT Keshe

Don't Miss it! LIVE Broadcast:

10 am CEST (Central European Summer Time) (EST 4 a.m.)

DAY 1 Saturday April 14th, 2018

DAY 2 Sunday April 15th, 2018

EXCITING RELEASE of the Keshe Foundation **SPACESHIP BLUEPRINT** will advance worldwide learning and development, promising to improve life for all of humankind.

Mr. Keshe predicts, *"You will be able to develop your own cars and ships and become the man of space."*

"DAY OF THE MOZHAN"

This unique name is an acronym for the revolutionary new science of plasma space travel, promising to carry us "beyond where we have ever been."

MOZHAN = A Spaceship that contains everything we need.

- **Man Originated Zone Habitation And Nutrition**

It transcends old ideas of spaceships built of metal and screws, and carries us into new knowledge of spinning plasma fields and transcending time and space, that has until now been only science fiction.

JOIN US! *"Together let us change the course of human race to peaceful space technology!" MT Keshe*

14-15 APRIL 2018 10:00 - 18:00 CEST

THE DAY OF THE MOZHAN

KESHE FOUNDATION SPACESHIP BLUEPRINT

TWO DAY CONFERENCE OPEN TO PUBLIC

WE ARE READY TO OPEN THE SPACE TO MANKIND

Mehran T. Keshe has taught continuously, bringing mankind closer for the next step. It is time to put all the puzzle pieces together.

As we gave the key to governments and then to the people, we have seen the people are open to share. The borders will be gone and one nation, one planet, one race becomes the reality.

You will be able to develop your own cars and ships and become the Man of space. **MOZHAN!** Join us and together let's change the course of human race to peaceful space travelers!

New Currency of the Keshe Foundation

— KESHE COIN —

Science in exchange for peace.
One nation. One coin.

The new currency of the Keshe Foundation (KesheCoin) will look similar to Bitcoin - except that its value will be 100% guaranteed by everything created within the Foundation (products of manufacturers, scientific articles, workshops, etc.) and not by speculation ('mining').

In the near future, the Keshe Foundation will install a new internet platform to allow all people and manufacturers to offer their products. It is then that we will be able to buy **LOCALLY** and make transactions with the KesheCoins.

It is understood that the value of KesheCoin will increase by 2.5% to 3% per year. The Keshe Foundation intends to create this 'money' for at least two reasons:

Independence from the conventional monetary system

- This currency will become independent of the deflation-inflation-financial crash cycles that currently accompany our official currencies. The fact that it will not lend itself to speculation but will keep it on a human scale.

Unaffected by speculation

- A world currency is created and supported by our work and not by the stock market; it will become the pillar of our autonomy and our movement for peace.

Ethical currency

- It will be monitored in the sense that it should never be used for any project related to war, arms or other terrorist activities.

The value of KesheCoins will be determined by the actual production of our work, and not by speculation or financial shenanigans. Technically, if you buy a KesheCoin, you will have bought an 'Action' from the Keshe Foundation linked with all its entities. It goes without saying that KesheCoin is based entirely on the ethics of the Foundation as described in the Charter of the Earth Council and the Universal Council Charter as well as in the Treaty of Peace.

United In Peace

ONE PLANET • ONE NATION • ONE RACE

The Universal Council Charter

**Congratulations to the Universal Council
for the completion of the Charter.**

By Jon Bliven

The Universal Council Charter was recently completed and has initiated a new chapter for humanity. It took a great deal of effort and the contributions of many of the members to be able to complete this Charter, a copy of which can be found here:

<http://keshefoundation.org/images/uc-charter/UC-Charter-in-English-2018-03-23.pdf>

It is hoped that like the Earth Charter, which was completed a little earlier, The Universal Council Charter can be translated into many of the members' native languages. The Earth Council Charter is released and available in several languages here:

<http://keshefoundation.org/about/wpt/ec-constitution>

Please check out the links to the Universal Council on the main Foundation website:

<http://keshefoundation.org/about/uc>

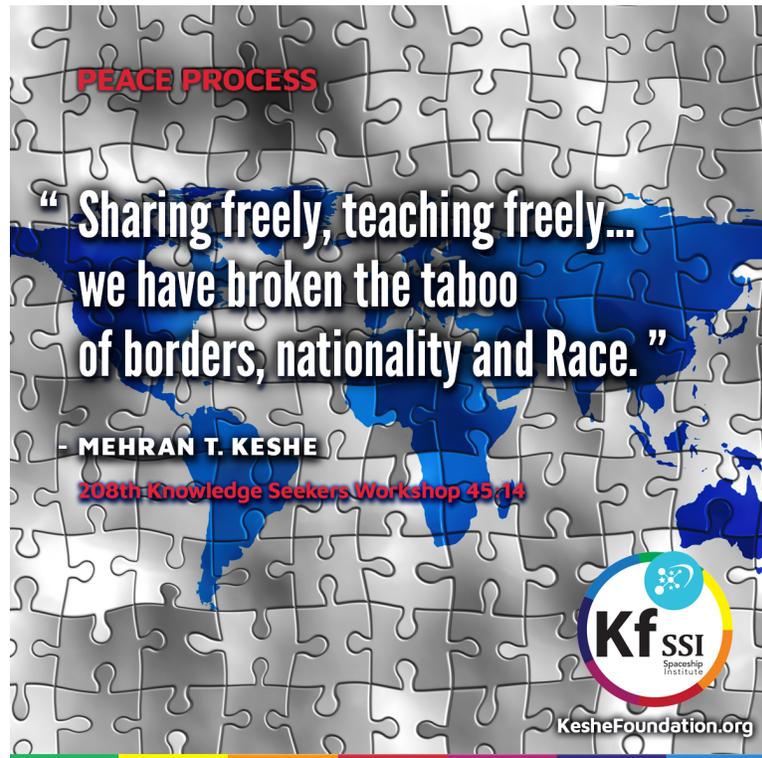

“The first rule to be members of the Universal Council is that : The Universal Council member should shine like the light of the creator, to be the source of light for other souls and radiate the light of the beauty of the creator and have and try to reach all attributes of The SOUL of the creator. In time creatures of the universe see this light and not the physicality of the man. The attributes of the creator has been stated in many scriptures of the man in the past. Secondly you are through your soul a member of the Council. The members of the council can't announce themselves as a member of the Council unless it is announced and registered under the Council's panels and no members of the Council can ever speak as themselves being a member and influencing their opinion or words, at this point immediately they lose their seat in the Council and a new member can stand for the position. Those who try to show that they are better servants of humanity they do not stand a chance to take a seat in the Council. Selection of the soul of the Council comes from service through giving from the soul and not by talk or physical actions.”

Mehran T. Keshe

Updates from Arizona

By Jon Bliven

With each passing month more and more puzzle pieces to a much grander plan are put in place. Many years ago when Mr.Keshe talked about things such as peace on earth and space travel it was a puzzle that was much too complicated for many to think it could ever come together. Slowly but surely more and more people heard the messages to their hearts and the wisdom of the words and aligned with the puzzle for our future. The edge pieces started to take place with the joint vision and soon others were sharing the possibilities of what it would look like when completed.

Some areas of the puzzle had to wait while other areas moved along very rapidly. While the puzzle was being constructed, efforts by some to delay or destroy it, allowed the supporters to recognize the power of non-violent activism.

Holding the energies of love and peace and correct action seemed to render opposition impotent. The puzzle is now starting to become more clear to all those around the Foundation who have supported it with their active engagement, through actions such as the construction of items like GANS, pain pens and magravs, and with subtle support of sharing videos and

talking with others about what was going on around the Foundation. All this action allowed the universe or the collective consciousness to show more of the beauty of the puzzle.

We have now witnessed the beauty of the formation of the Earth Council and the release of their Charter. The Universal Council likewise finished their Charter. The puzzle becomes more and more coherent, as peaceful actions replace the old paradigm, which had become corrupted and self-serving. Our puzzle placed the earth council at the very center and the universal council there to support the many areas of the world with a number of different languages in a way where races even from off planet would be able to interface and support this planets growth. Factories are now being added to the puzzle, to bring the technology to the masses around the world, where all people are treated equally with value worth us all supporting. Each factory and the many employees will act as a collective force of service that will add a rich structure to the total structure and allow the councils to work in meaningful ways to create peace and hope. The new products of the factories will bring waves of new concepts and practical solutions, which will start to make people's lives more enjoyable. One new product will lead to others, as the puzzle will start to take a beautiful shape.

The Keshe coins will bring in a whole new section of the puzzle. It will not be simply another cryptocurrency but will be much more than what many are expecting. Its beauty will spring forth in a way that it will become a hidden gift from the universe for all of humanity. For those purchasing the coins now, they are adding their support to accelerating the transition and the completion of the puzzle.

In my mind the coins are a first step to a cash-less society where all share in the beauty of the creation. Let us all watch as this area unfolds its pieces into the whole puzzle.

The education section of the puzzle has been put into a stronger and wider structure that all may participate. It is an area of the puzzle that has been worked on from day one and shows its strength in the number of supporters and the understandings of the materials taught.

The health area has shown some advancements but these are just the tip of all that is to be added to the puzzle. There are many universal understandings that will be shifted, to benefit the life of all of humanity. This is coming.

The tools of agriculture and food production are being added as well as new ways of obtaining energy for growth and sustenance. This area will come together as we begin our interactions with the galactic community and realize that the old paradigm of killing another creature for our benefit is in need of correction. These pieces may take a little longer to fall into place but as the puzzle starts to take more shape people will begin to see the bigger picture of our universal consecutiveness.

The space and transportation part of the puzzle is my favorite area as it will and can be like the 'everything section.' When you are a part of a light craft there is nothing that can't be part of your reality: health, experiences, travel, energy and food, ability to serve in significant ways, and much more. This area will lead to the changing of travel on this planet and new ways to move around where we will become a more united world. No borders, no rulers, no division, no need for religion, and thus no need to fight another. The reality of the vastness of space and new horizons will be opened up for all and new truths will become our reality.

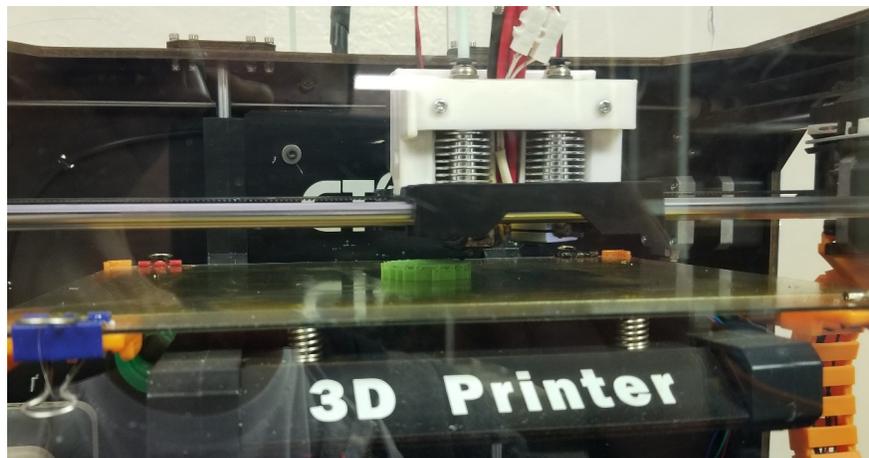

So now we are getting a glimpse of what this puzzle is, that Mr Keshe and the Foundation have been orchestrating in a way that the entirety of humanity may benefit and go forward in peace. Yes, it is coming together and when you recognize the depth and breadth of the entire puzzle it is grand. Not only does it support us now, but it also lays a strong foundation that we may continue to thrive. Find your puzzle pieces and add them to what is to be created knowing that your efforts to serve are being seen.

How to control a stepper motor

By Miguel Bueno

Hello My name is Miguel, I've been working at the Arizona facility since April of 2016. My background is in Physics with a focus on nano-films used for computer hard drive memory. I've also done quite a bit of drafting (design) work using SolidWorks. I'm very lucky in that I get to work on and use the 3D printers at our facility. We mainly use our 3D printers to print out test parts for new experiments and to print out specialty parts like the plate hanging clips in the home GANS production kits we sell through the [Keshe Foundation website](#).

One thing has been constant throughout our research here in Arizona, the need to accurately control motors for our reactors. We've recently become very interested in spinning our reactors at low speeds in an effort to create a mixing effect

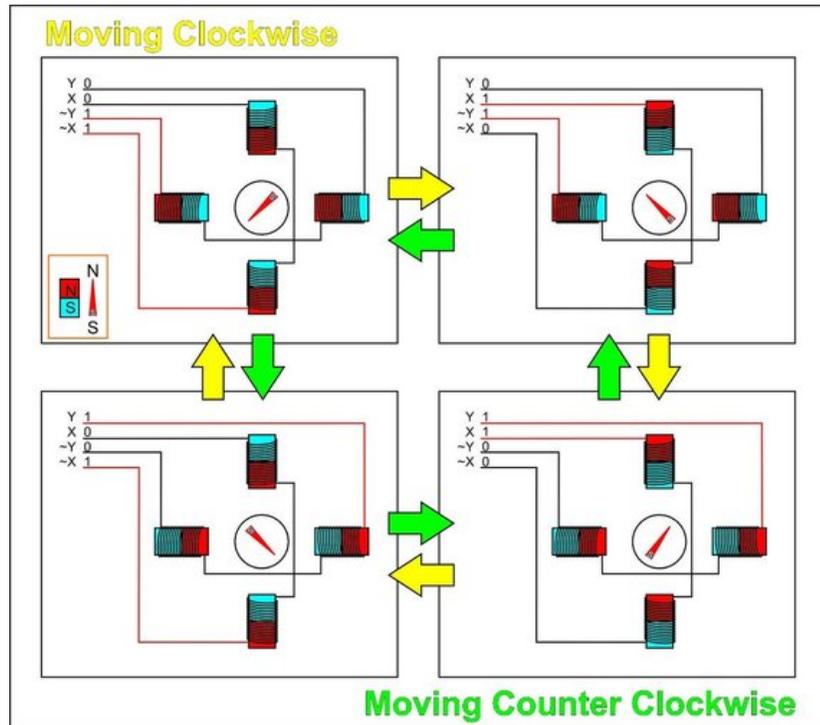

within the reactor. We have also found that motors typically need to have substantial torque to be able to spin the loaded reactor. To meet both of these requirements, I will explain how a stepper motor works and will show how you can make a controller to drive the motor.

Here are the items you will need:

1. Microcontroller (I will be using an Arduino Uno)
2. L298N H Bridge
3. Stepper Motor
4. Potentiometer
5. Small Breadboard
6. Jumper Wires

The process of getting everything wired up is relatively simple but we must know a little about how the stepper motor works first. From the image on the right, we can see that by energizing the correct pins we can drive the motor to spin in a clockwise or counter clockwise direction. All we have to do is figure out what pins correspond to each of the motor's wires.

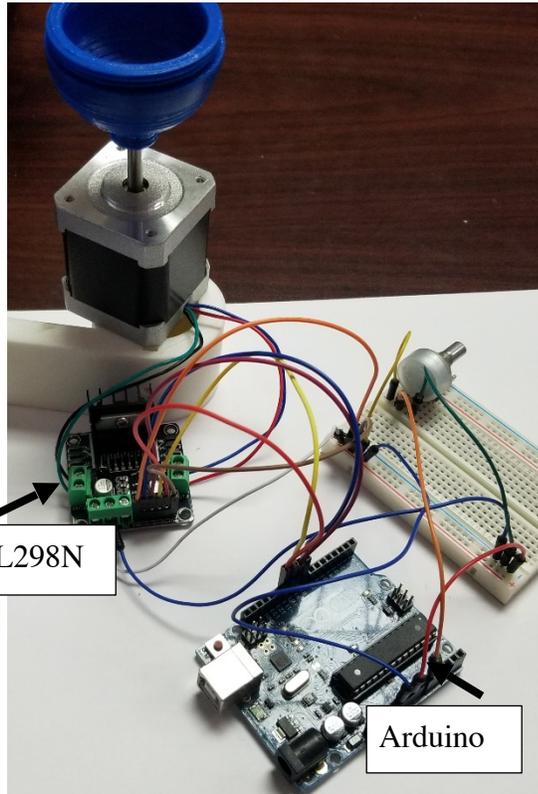

From the image we can also see that the Y wire connects to 2 magnets then becomes

the -Y wire. To figure out which of the wires coming out of the motor are paired we perform a continuity test. Using a multimeter, we can measure the resistance between each of the four wires coming out of the stepper motor. If the resistance is low between two wires then these two wires are a paired (positive and negative Y for example). At this point I like to label the wires on the motor using tape so that I don't get them mixed up.

Next, we can begin wiring everything up to the L298N H Bridge by connecting:

- Vcc to the 5v pin on the Arduino
- In2 to pin ~9 on the Arduino
- Connect GND to GND on the Arduino
- In3 to pin ~10 on the Arduino
- In1 to pin 8 on the Arduino
- In4 to pin ~11 on the Arduino
- Out 1 and 2 respectfully to the 1st pair of wires (Y and -Y) from the motor.
- Out 3 and 4 respectfully to the 2nd pair of wires (X and -X) from the motor.

The last thing that needs to be wired in is the potentiometer so that we can control the speed of the motor.

- Center pin on potentiometer to A0 on the Arduino
- Positive and negative on the potentiometer to 5V and GND respectfully on the Arduino.

The last step is to connect the Arduino to your PC and launch the Arduino Software. One great thing about using an Arduino is that the software comes loaded with great example codes. This particular project is covered under File -> Examples -> Stepper -> Stepper_speedControl. Once you find the example, hit the upload button to get the project onto your Arduino. After about 2 seconds of loading the program, the potentiometer can be used to control the speed of your stepper motor.

The great thing about this project is that the same hardware can be used to drive and control the speeds of all sorts of different types of motors. This will give you the ability to experiment with any speed/power motor you desire.

The Keshe Foundation **Invites Knowledge Seekers** to participate in the **Spaceship Blueprint** launch by submitting presentations of *their* space based plasma projects to: webmaster@keshefoundation.org Bring plasma technology projects to the Keshe Plasma Reactor Group every Tuesday with Rick Crammond.
